

1. Peg mechanism

How the \$1.00 price target is maintained

Peg deviation

Price - \$1 spread

Mean reversion

Speed of return to peg

Arbitrage efficiency

CIP / minting-redemption

2. Monetary economics

Stablecoins as money-like instruments

Seigniorage

Issuance profit & reserve
backing models

Money supply metrics

Circulating supply,
velocity, on-chain M2

Reserve adequacy

Collateral ratio,
over-collateralisation

3. Market microstructure

Trading, liquidity, and price formation

Liquidity

Bid-ask spread,
depth, Amihud ratio

Price impact

Order flow, slippage,
AMM curve mechanics

Price discovery

Hasbrouck IS,
cross-venue leadership

4. Risk and stability

Failure modes and systemic fragility

Run dynamics

Redemption spirals,
death spiral risk

Volatility measures

VaR, CVaR, realised
variance, GARCH

Contagion

Spillovers, CoVaR,
network effects

5. Cross-market linkages

Stablecoins in the wider macro and crypto system

Safe-haven demand

Flight-to-quality flows,
Tether premium

Interest rate linkage

DeFi yield, T-bill
spread, RWA backing

FX and dollarisation

Crypto-dollarisation,
EM currency substitution
